The new HQTC. Innovation lives here

In 2016 Prima Industrie inaugurated its new **Headquarters and Technology Center**, which is structured in a total of 5,000 square meters of which 2,500 is dedicated to corporate offices and divisional offices of Prima Power and 2,500 is dedicated to the demo room and customers' hospitality. A structure that can easily accommodate 4 guests delegations simultaneously, with an 80-seat training room, a demo room dedicated to customers from all parts of the world, in which 11 of our machines are operating, including an entire production line.

It is a building equipped with the **latest technologies for energy efficiency,** ranging from thermal isolation to energy production through photovoltaic panels, solar panels, and a geothermal plant. Even lighting management is automated with a home automation system in order to reduce waste. In other words, this will mean reducing CO₂ emissions by approximately 300 tons per year. A philosophy closely linked to the "Green Means" technology that Prima Industrie applies to all product lines and that allows significant reduction in consumption compared to conventional technologies.

PRIMA INDUSTRIE

Never stop innovating

Prima Industrie is compliant with the Industry 4.0 guidelines, helping its customers turn their production sites into smart factories: smart and interconnected machines (also from a cloud-based point of view), increasingly powerful software, connected with factory systems, and an even more sophisticated remote machine diagnostics will allow a predictive maintenance with important benefits in terms of time and money saved. Moreover, photonics and laser are Key Enabling Technology for Industry 4.0, as defined by the EU, and that makes Prima Industrie a key player of the 4th industrial revolution.

PRIMA INDUSTRIE

SHAPING THE FUTURE

Outstanding performances

We believe that delivering good results is the best way to address the expectations of our shareholders and create value. 2016 was a record year in the history of the Group, with the highest revenues, EBITDA, and order collection ever.

This positive performance was the result of the significant investments made by the Group during the recent years and in particular those in research and development aimed to the renewal of the product range, to the development of the proprietary fiber laser source, as well as investments to strengthen its presence in several geographic markets of particular importance, among which is China.

However, the main driver for 2016 growth has been our new HQTC (Headquarters & Technology Center) in Collegno (Torino), where all the Group product lines are exhibited, contributing significantly to the Group order acquisition.

Increase in NET PROFIT

Data compared with 2015

Ladies and Gentlemen,

2016 has been a successful year for your Company and has confirmed that our mid-term targets (€ 500 million of revenues in 2019, as per our Business Plan) are achievable.

Also thanks to the generally positive situation of our main markets, in particular USA and China, our 2016 revenues have reached € 393.9 million, up 8.1% compared to previous year.

This value is the highest achieved in the 40 years of history of our Group and the growth rate is double of that achieved in 2015.

The profitability has also significantly improved with EBITDA at \leqslant 35.4 million, up 13% and Net Profit at \leqslant 10.2 million up 80%.

The improvement is significant also considering that our Consolidated Accounts have been diluted, as expected, by the results of Prima Electro Division, which had to face a decline of revenues due to lower orders by one of its main customers and to phase-out/phase-in between CO, and Fiber Lasers.

Important drivers of our growth, which we believe has been stronger than the reference market, have been the investments in new products (Laser Next has become a reference in 3D laser market) and in market coverage (Prima Power Suzhou and new sales/service organization in China).

Our performance has been outstanding in the North American market (our first in size) where we have registered a growth of 18% year-over-year and, even more, in China, where growth has been 35%.

The main accelerator of 2016 has been, however, our new HQTC (Headquarters & Technology Center) in Collegno (Torino).

HQTC was inaugurated in late May, and in the first 6

months of operation over 1,000 customers from 40 countries have visited it.

With 9 Stand Alone machines/Flexible Manufacturing Cells and one complete PSBB line (Punching Shearing Buffering Bending) exhibited, HQTC has become a real European Hub for Laser and Sheet Metal Fabrication customers after those already established in Chicago for North America and in Suzhou for China and Asia Pacific. Thanks to the solid order intake, our year-end backlog has increased by 22% to € 143.4 million, which represents a satisfactory base for further growth in the current year.

Message to the stakeholders

R&D activity has been, as usual, very intense (5.8% on revenues) and several new products have been introduced to the market in the main exhibition of the year, EuroBlech, held in Hannover in October 2016.

Among them, Laser Next 2130 (bigger size version of our Laser Next 3D laser family), BCe Smart (compact and automatic Panel Bending machine), Combi Genius (a new high performance Punching/Laser combi machine) and CF4000 (the 4 kW model of our CF fiber laser family).

As far as our CF fiber lasers, we are pleased by the performance of the many dozens of lasers delivered in 2016, and are still investing to increase power level beyond 4 kW and to improve manufacturing costs and production efficiency.

Also a lower power (1 kW) version has been developed,

to target, among others, Additive Manufacturing applications, where we are getting more and more experience by participating in several EU and national research projects.

From the financial view point, we have managed to keep well under control our working capital notwithstanding the increase of revenues and our Net Financial Position at year-end was € 84.2 million, strongly improved from previous year. This is the lowest level of net debt since the Finn-Power acquisition in 2008 and leads to financial ratios significantly improved (PFN/EBITDA=2.4, PFN/Net Equity=0.6) which are largely compliant to the covenants agreed for Banks and Bond financing.

In consideration of the good year-end order backlog and to the satisfactory order intake at the beginning of 2017, we are confident that in 2017 we will be able to further grow and improve our results thanks again to the good performance of our Prima Power Division and to improved financials in Prima Electro.

Of course we are aware that uncertainty and volatility may be quite high this year after the recent events on the European and American political and economic scenario. However, our strengthened presence in many world markets will hopefully allow us to balance oscillations in single countries.

Also our technology (Photonics and Laser-based Manufacturing, Integrated Systems) is key in high-tech manufacturing national programs as Industrie 4.0 in Germany, Industria 4.0 in Italy, China 2025, etc. and this should drive robust growth in the future years.

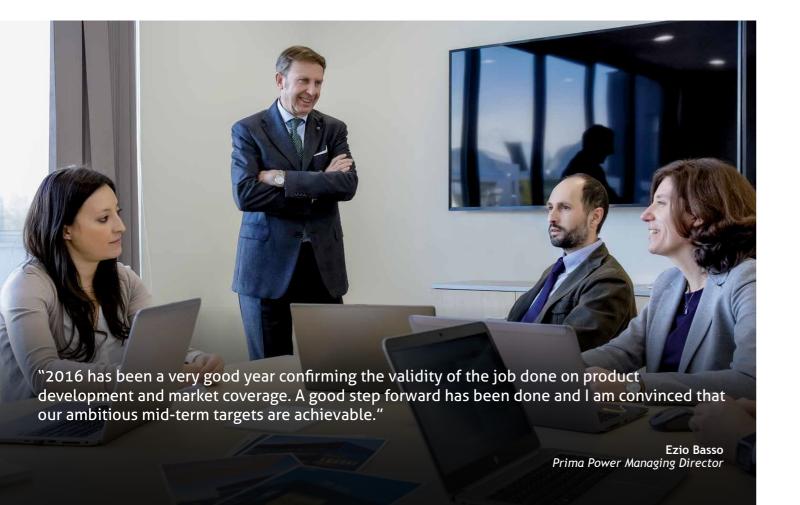

The high professionalism and skills of our 1664 employees in 26 countries has allowed us to achieve the satisfactory

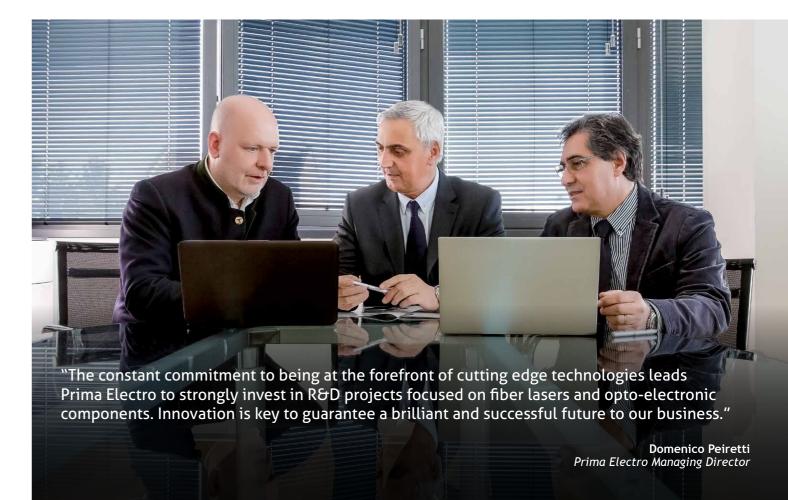

results this year and is key for our future development: to all of them my sincere appreciation and thanks. In conclusion, we are pleased to propose to our next General Meeting to increase to 0.30/share (from 0.25/share in 2016) the dividend to our shareholders. We also would like to thank all our stakeholders and friends for their continuing confidence and support.

Yours sincerely,

fun

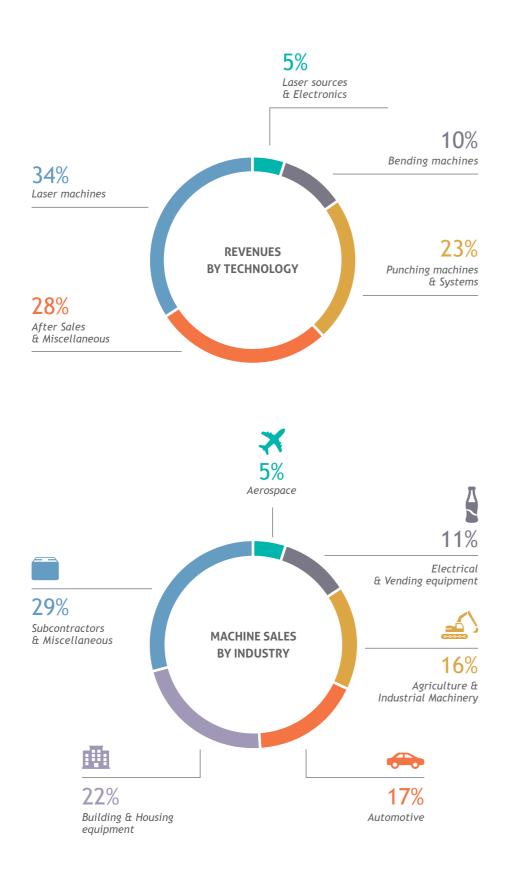

Gianfranco Carbonato Executive Chairman

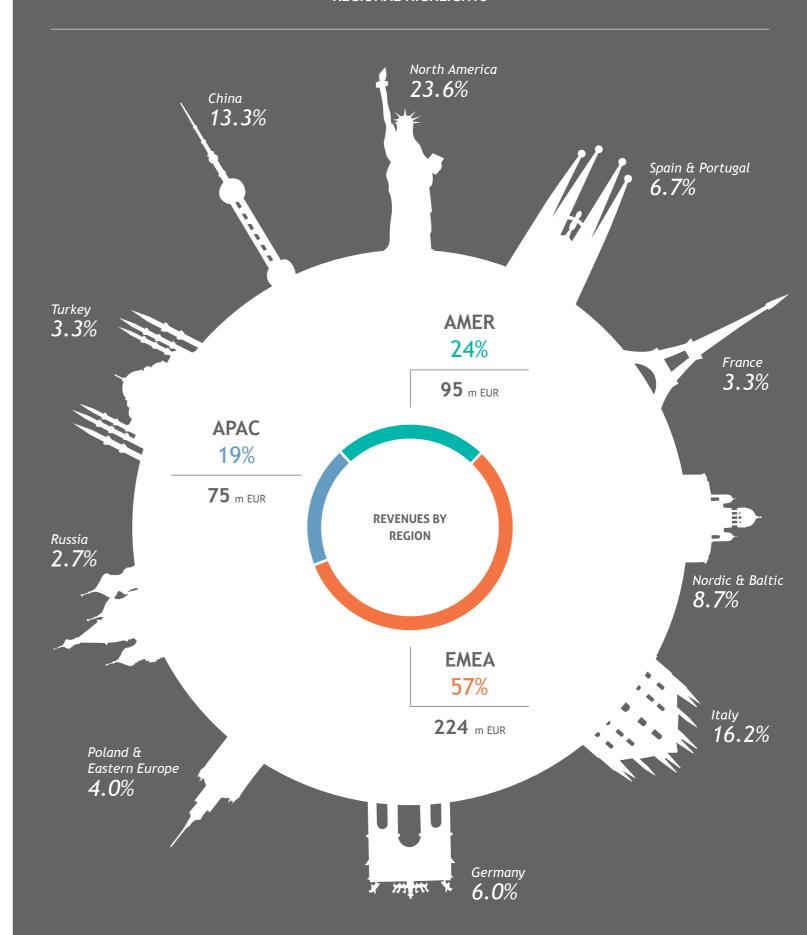

REVENUE ANALYSIS AND BUSINESS RATIOS

Key figures

REGIONAL HIGHLIGHTS

Green Means. More profit with smaller footprint

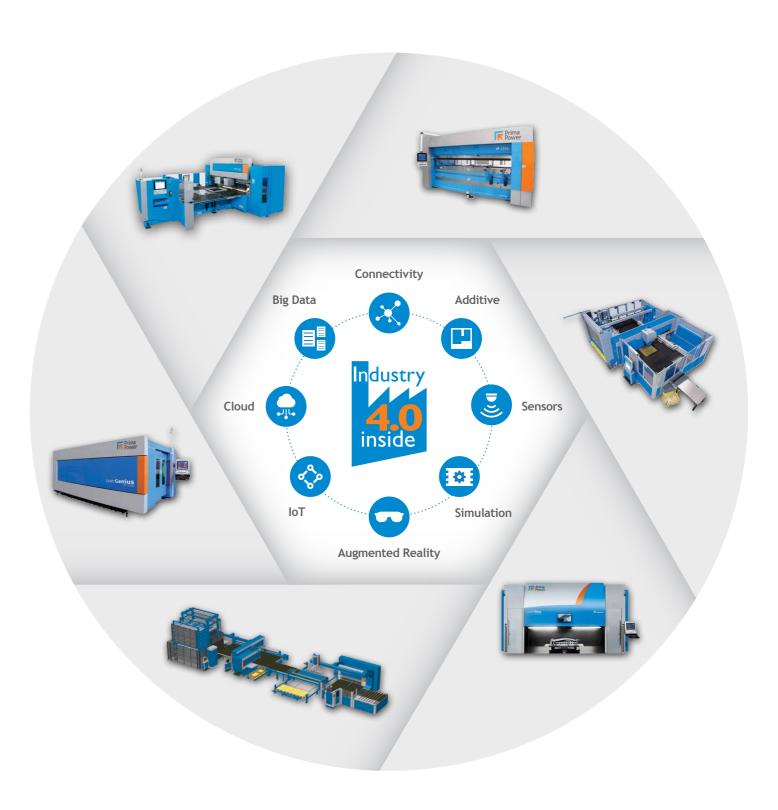

The Prima Power range has a long tradition of continuous development, greater flexibility and operating economy through versatility, high automation level and low energy and maintenance cost. Also for a long time, the ecological aspects have been included among design criteria.

Under the banner Green Means® this translates into technology and knowhow which meet the requirements of both productivity and more sustainable manufacturing. We are, for example, the only company in the field with a fully servo-electric product family.

Technology and solutions for Industry 4.0

Thanks to big data analytics, planning the manufacturing process and monitoring it in real time allows the refining of complicated processes and the management of the supply chain leading to lean production. This translates to huge benefits for the customers in terms of time and cost reduction. Prima Industrie 4.0 products and software has the potential of boosting competitiveness for small and medium size companies. Analysis of machine condition and performance allows us to know in advance when a machine needs an update or when a visit to the customer is necessary. As a result, annual maintenance operations and scheduled visits are planned and integrated in advance granting an improved operational efficiency and savings of money and time for the customer.

Prima Power / 2D Laser machines

3D Laser machines

LASER GENIUS

Best quality, high accuracy and productivity on the whole thickness range.

PLATINO FIBER

Productive, efficient and easy to use fiber laser cutting machine. The best compromise in terms of flexibility and high quality in all thicknesses and applications.

RAPIDO

Three-dimensional cutting and welding. The fully tried-and-tested "workhorse" for every application with fiber and CO₂ laser.

LASER NEXT

First-class performance 3D fiber laser machine designed, developed, manufactured, and tested for the mass production of automotive components.

PLATINO CO,

Flexiblity and high quality in all thicknesses and applications.
User-friendly machine with an excellent price/performance ratio.

MAXIMO

2D laser cutting machine with customizable working area on customer's requirements or processing big size sheets.

OPTIMO

The higher-class, three-dimensional machine for the cutting and welding of large workpieces with superior quality and accuracy.

LASERDYNE 430

The flexible laser machining platform for a wide range of high-precision applications.

LASERDYNE 606D

Incorporates two completely independent 5 to 7 axis laser cutting, welding, and drilling systems in a single structure.

LASERDYNE 795

The premier multi-axis laser processing system for drilling, welding, and cutting precision components.

Prima Power / Punching & Combi machines

Bending machines

COMBI GENIUS

Servo-electric Combi Genius punching and fiber laser cutting cell provides energy efficiency, low maintenance requirements, high-speed operation, including large tool capacity and easy and fast set-up change.

EX SERIES

Ex Series is a servo-electric turret punch press series, offering state-of-the-art in servo-electric punching technology in a flexible and affordable package.

FastBend - FBe

Highly-flexible, efficient, productive and user-friendly servo-electric bending solution.

BCe SMART

New semi-automatic bending process by Prima Power with manual material handling in a single ergonomic sequence.

PUNCH GENIUS

Punch Genius, the full-featured, high-performance servo-electric punching solution with numerically controlled, servo-electric axes for enhanced productivity.

SHEAR GENIUS®

Shear Genius® SGe is a servoelectric punching/shearing cell based on integrated punching and shearing, automatic loading, intelligent right-angle shear, and component exit offering more capacity, quality, and cost efficiency.

BCe

Automatic bending process by Prima Power with shorter cycle time for medium-small production batches.

EBe

Fully-automatic servo-electric machine for better bending and improved operation economy.

SHEAR BRILLIANCE

Shear Brilliance is a servo-electric ounching/shearing cell based on the very latest in composite materials, servo-electric technology, and linear drives to achieve outstanding performance values.

EBe FM

Fully automatic servo-electric panel bender with a best-in-class automation and customization.

eP SERIES

Servo-electric Prima Power eP-brake represents the state of the art in combining safety, productivity, and precision.

Prima Power / Systems & Automation

Software & Digital manufacturing solutions

PSBB

The compact PSBB line processes blank sheets from an automatic storage into ready-bent, high-quality components automatically. PSBB stands for punching, shearing, buffering and bending.

LPBB

The compact LPBB line processes blank sheets from an automatic storage into ready-bent, high-quality components automatically. The manufacturing line integrates punching, laser cutting, bending and intelligent part handling.

COMBO TOWER

Combo Tower is a flexible and compact storage system to automate the material flow. Different materials are made available at the working point quickly and in a practical way.

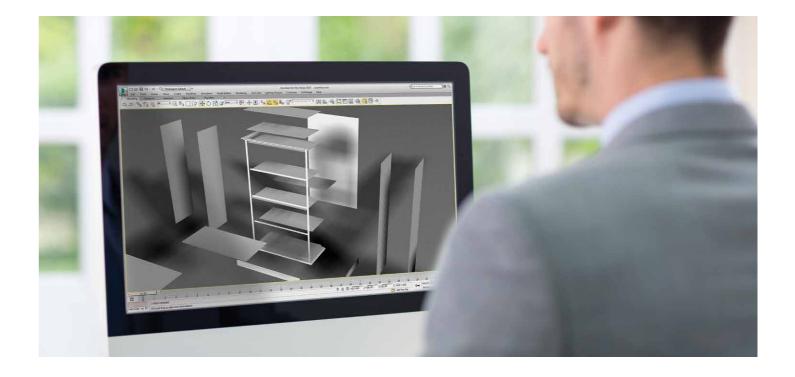

LOADING AND STACKING ROBOTS

High-performance loading, unloading and stacking robots for material and part handling in an accurate and efficient way.

NIGHT TRAIN FMS®

Night Train FMS® automates the material flows and information systems of a facility and combines individual manufacturing stages into a single flexible process. Systems are customized using the wide Prima Power range of high-performance machine tools, integrated cells, automatic material handling solutions, and software.

CAM

Prima Power CAM programming software solutions are user-friendly, efficiently-optimized, and provide high productivity and material savings. They can be connected to customer ERP.

HMI

HMI Tulus® manages machine operations, through an easy and intuitive interface. Tulus® MUPS improves efficiency, monitoring machine status remotely, inside or outside the factory.

PLANNING & MONITORING

Tulus® Office is a powerful tool for work planning and machine capacity controlling. With Tulus® Mobile Information System it's possible to check at once the status of your production wherever you are.

REPORTING

Prima Power Tulus® Production and Performance Reporting creates reports used for production planning and further analysis. Reports include information on production process, programs, components and materials.

MANUFACTURING EXECUTION SYSTEM

Tulus® Power Processing is a flexible M.E.S. It offers 2 ways ERP connection. The whole production process is always under control, from automatic orders import to the finished product and reporting.

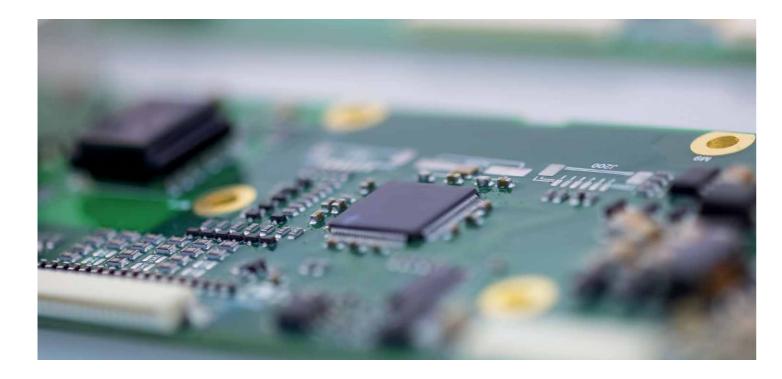

INDUSTRY 4.0

Collection of smart interconnected machines and software collecting data through sensors and cameras. Machine diagnostics, predictive maintenance and production performance analysis services are available.

Prima Electro / Electronics

Laser technology

The electronics BU of Prima Electro designs and produces industrial-grade electronics for several markets such as Motion Control & Automation, Industry, Energy, Offshore & Marine and Transport. Always at the forefront of the most significant evolution in terms of technology and performance, Prima Electro is also a top player in the CNC market thanks to the Osai brand.

OD700

OD700 servo-drives with EtherCAT fieldbus, available in six different sizes with nominal current ranging from 3A up to 36A, with integrated safety function STO (Safe Torque Off).

OPENcontrol CNC

Highly scalable CNC based on several powerful hardware platforms able to manage up to 24 and 64 axes, of which 12 simultaneously interpolated.

нмі

Operator console for laser cutting machines.

OPTICAL POWER SUPPLY

Optical power supply for metering applications in railway market.

POWER SUPPLY

15kW AC/DC power supply for industrial applications.

CPU BOARDS

CPU boards for energy applications.

The Convergent Photonics laser products are the result of intense research and development by an international team of engineers and continuous improvement of the assembly and test processes as well as component design. Convergent Photonics laser sources enhance their status as a versatile solution, universally recognized as superior in all the most demanding metal processing applications.

CF3000/CF4000

Highly resistant to back reflection, the new 3kW/4kW Fiber Laser allows superior cutting up to 20 mm mild steel.

CT6000

High Power Twin Laser. Innovative concept laser equipped with two different process fibers for both welding/brazing and cutting applications.

CM4000

CO₂ lasers equipped with magnetic bearing turbine, smart gas feed system and reliable power supply.

CF1000

Compact 1 kW Fiber Laser for cutting, welding and additive manufacturing applications.
