

Prima Finn-Power

The PRIMA group includes R&D and manufacturing facilities located in Italy, Finland and USA, as well as sales and service subsidiaries in over 60 countries in order to guarantee local support to our worldwide customer base. With about 1400 employees worldwide, outstanding know-how and state-of-the-art technology, we are one of the prominent companies in the metal working global market.

We pride ourselves in our ability to provide flexible, tailored solutions to support our customers in their quest for productivity and quality. The NUAIRE system is a prime example: our Platino laser cutting machine and a Tower Server are fully integrated within the company ERP by our customised, end-to-

end system management software, which takes care of the whole process, from the ERP-generated production schedule straight to the finished parts.

Not only do we offer a wide variety of products, but also a range of solutions for their integration in flexible manufacturing systems. From stand-alone machines to the most complex fully automated FMS installation, through integrated

software solutions, we are flexible to adapt to every requirement.

With us, customers also find energy-efficient solutions. Whether you are an environmentally-conscious organization or are after energy and consumables savings, our state-of-the-art technologies – fibre lasers and servo-electric actuation, to name only a couple – will contribute to the achievement of your targets.
